A DJ Civils Company

ABOUT US

Allied Infrastructure is a leading specialist civil engineering contractor delivering projects across the UK and Ireland. We provide a broad range of services, from short-notice reactive repairs to large-scale, multi-disciplinary capital projects, all delivered with a strong focus on quality, safety, and operational continuity.

OUR CORE SERVICES

- Pavement Repairs
- Civil Engineering
- Asphalt Surfacing
- Surface Preservation
- AGL Civils
- Line Marking
- Joint Sealing
- Cutting & Drilling
- Site Investigations

"Allied have supported us to get the best possible engineering solution. With a focus on deliverability, safety and maintaining airfield operations, the Allied team helped us develop a complex scheme to the highest of standards."

Manchester Airport Group (MAG)

WHO WE ARE

Allied Infrastructure is a specialist contractor operating across the aviation and infrastructure sectors. Based in Leigh, we deliver complex, time-sensitive works nationwide, with a strong focus on safety, quality, and operational continuity.

Founded in 1994 as Allied Drilling, we have grown from a specialist subcontractor into a leading principal contractor, delivering projects at major airfields and defence sites across the UK and internationally.

Our strengths include self-delivery through a skilled direct workforce and specialist plant, extensive experience working in live operational environments, in-depth materials expertise, and a strong commitment to sustainability through initiatives such as our Carbon Reduction Plan and low-carbon product trials.

This combination of experience and capability gives our clients confidence that projects will be delivered safely, efficiently, and with minimal operational disruption.

In late 2025, Allied Infrastructure Management was acquired by DJ Civils. Allied continues to operate as the same business, now supported by the strength, shared expertise, and long-term investment of a specialist civil engineering group.

A DJ Civils Company

Our clients include international airport operators, defence estates, private organisations, and others:

SECTORS

AVIATION

We have extensive experience delivering works in aviation environments. We understand the unique protocols and time constraints associated with airside operations and have the expertise to deliver projects safely, efficiently, and to a high standard. We also deliver a wide range of landside projects, including highways, car parks, and surrounding infrastructure.

HIGHWAYS & INFRASTRUCTURE

We provide a wide range of solutions to clients across the highways and infrastructure sectors, drawing on our self-delivery capabilities. Our experience includes works to local and strategic roads, bridges, tunnels, utilities networks, and other essential infrastructure.

PORTS

We have delivered works at numerous ports across the UK, including the Port of Liverpool. We combine multi-disciplinary capability with expert materials knowledge and proven experience operating in busy, live environments.

RAIL

Allied Infrastructure has delivered projects within the rail sector. Our experience working on regulated, time-sensitive airfields and defence sites transfers directly to rail, enabling efficient delivery within limited possessions while maintaining strict safety standards.

Allied Infrastructure are experts in a range of Civil Engineering services including:

SERVICES

PAVEMENT REPAIRS

We have the experience and capability to deliver a wide range of pavement repair solutions, helping our clients to maintain safety, compliance, and operational continuity. We are able to provide repair solutions for both asphalt and concrete pavements, using high-quality, proven materials and techniques. The core materials we use include: Ultra-Band and Ultra-Screed, IronGuard, Maxi-Crete 20 and 30, Permafyx L273, Maxi-Flex 50 and 100 (Armourscreed AS50), and Addagrip.

CIVIL ENGINEERING

We have the capability to deliver a wide range of civil engineering projects across airside, landside and wider civil environments. This includes Pavement Quality Concrete (PQC) bays, concrete fillets, landside holding areas, barrier and plaza systems, car parks, highways works such as alterations and rapid repairs, reinstatement of manhole chambers, and Cross Carriageway Duct (CCD) installations.

ASPHALT SURFACING

We have vast experience in delivering asphalt surfacing works in aviation environments, where quality, safety and operational continuity are critical. Our experience spans from localised defects requiring urgent repairs, to large-scale re-surfacing schemes underpinned by months of advanced planning.

SURFACE PRESERVATION

We have more than 15 years' experience in the delivery of surface preservation projects using Rhinophalt®. Manufactured by our long-term partner ASI Solutions Ltd, Rhinophalt® is a cold, spray-applied surface preservation treatment, which is used to extend the service life of bituminous pavements. Rhinophalt® is approved by the Highway Authorities Product Approval Scheme (HAPAS), as well as by the Civil Aviation Authority (CAA), and the Ministry of Defence (MOD).

SERVICES

AGL CIVILS

We are the most experienced AGL civils contractor within the UK marketplace, having delivered these works for over 30 years. Our core capabilities include the installation and replacement of AGL seating rings, installation of AGL ducting in grass areas and pavements, installation of AGL pits, AGL stabilisation cores, and the civil elements required for cable chases.

LINE MARKING

We are hugely experienced in delivering line-marking services within aviation, defence and infrastructure environments. We understand the exacting compliance and safety standards required by our clients, and are able to deliver precise, high-quality and durable line-markings, utilising high-performance materials and in-house equipment.

JOINT SEALING

Joint sealing is one of our core capabilities, and we have a wealth of experience across airfields, highways, ports, and infrastructure. We have experience with a wide variety of joint sealing materials, including both fuel resisting (typically hot-poured) and non-fuel-resisting (typically cold-poured) products. Our core materials include: N1 & N2, Thioflex 555, Ultra-Seal 45 & 60, and Ultra Band.

CUTTING & DRILLING

We have successfully delivered specialist cutting and drilling works for more than 30 years, and are therefore one of the most experienced contractors within the UK marketplace. We are able to provide a wide range of cutting and drilling services - including (but not limited to): floor sawing, wire sawing, core drilling, concrete bursting and track sawing.

SITE INVESTIGATIONS

In recent years, we have undertaken a significant number of Site Investigation (SI) projects. Our recent experience includes coring and sampling works, topographical surveys, GPR surveys and CCTV surveys. We have also carried out investigation works to duct networks and pits.

WHY JOIN US?

Exciting career opportunities

We operate within the dynamic and fast-moving aviation sector, delivering complex, high-profile projects in "Safety Critical" environments. We help our personnel to develop technical knowledge, time management, and decision-making, within an exciting working environment.

Investing in people

At Allied Infrastructure, we are passionate about nurturing talent, and offer a wide range of training and hands-on learning opportunities to support this. We seek to promote from within wherever possible, and many of our management personnel have progressed from junior level roles within the business.

Collaborative culture

Our culture is based on teamwork and open communication. Our senior management team are always accessible, and we actively encourage "ground-up" ideas and suggestions to improve our business.

Diversity & inclusion

We value diverse backgrounds and perspectives, and believe these make our business stronger, more creative, and more effective. We strive to maintain an inclusive workplace environment, where everyone feels respected, valued and supported.

Family business ethos

Allied Infrastructure began as a family business, and we strive to maintain a friendly and enjoyable working environment.
